About Me

Kia ora! I am a full-stack web developer with a passion for continuous learning. Following my graduation in IT in 2016, I initially pursued various roles to support my family's financial needs. Seven years later, I have now steered my career path toward software development. I am recently graduated from Dev Academy and equipped with an entire set of new skills, both technical and soft, and I'm excited to utilize them going forward. My past experiences reflect my resilience, adaptability, and commitment to personal and professional growth. I am eager to continue my learning journey while providing my skill set to potential opportunities.

Projects

Tons Grocery http://ton-mini-grocery.devacademy.nz/

GitHub link: https://github.com/anthony2515/mightyape-clone

- It's a personal project that is inspired by cloning Mighty Ape. However, I'm still working on it as it has so many features to work on. But most importantly, I met my MVP(minimum viable product) to get this started.
- The MVP for this project is to add an admin page (no authentication yet) and the admin can add products and are able to upload an image of the product and post it on the home route
- I used CSS, HTML, Javascript, React.js and sqlite3

Hungry Games https://github.com/anthony2515/Hungry-Games

- This is one of our group projects that I worked on and this is made for users who are confused about choosing a restaurant. The main goal of this project is to give them one random restaurant to go to.
- My contribution to this project is to consume an API from Google Maps API to get the specific coordinates of the location that users typed and also made a delete functionality for users to delete some locations that they don't want on the list
- We used CSS, HTML, Javascript, React.js and sqlite3

Kanban Board https://github.com/anthony2515/kanban-board

- a simple personal project that replicates a Kanban Board where the user can add a backlog and move tasks to the next stages until it's done
- I used CSS, HTML, Javascript, React.js and sqlite3

Experience

Dev Academy Aotearoa
Aug 2023 - Dec 2023
Student

It's a 17-week web development boot camp that imitates a real-life development team. This course taught us a modern tech stack with a strong focus on human skills, collaboration, and working in a team using agile methodology. We were trained to work in pairs daily with an opportunity to give valuable feedback to each other and work on a larger group of 4-5 members before the weekends.

Skills:
- Test Driven Development using javascript libraries(vitest,supertest,mock,nock)
- Can write clean and readable code
- React.js, Javascript, Typescript Knex, Node js, Sqlite3, HTML, CSS, Handlebars.js
- Building and Consuming APIs
- Git and GitHub
- Human Skills to collaborate effectively in a team environment

Glenrosies Farm
Apr 2022 - May 2023
Dairy Farm Assistant

- Milking cows every day from 5 am to 5 pm depending on the season
- Calving
- Treating sick cows that have Mastitis, High Somatic Cell Count, Lame Cows

- Setting up paddocks with rails/break
- Pushing/moving cows
- Setting up paddocks with rails/break

Parkvale Mushrooms

Jan 2019 - Apr 2021

- My main job is to pack mushrooms and send them to the courier
- Sell them to customers coming to our shop
- Sometimes I pick mushrooms to cover someone not around

VXI Global Solutions

Nov 2017 - May 2018
Technical Support Representative

- Helping customers from the US to resolve their product issues such as telephone service and internet connectivity
- Scheduling technician appointments for customer
